RFQ Engineering and Construction Management Services for Evers Road Bridge

The following questions were asked via email communication on Mon., 05/16/2016. The answers appear in **red** and are provided here for your reference.

1. Will we need to include a Geotechnical Engineer on the team or will the City provide that service separately? **Yes – the City will not hire one separately.**
2. Has an Advanced Funding Agreement (AFA) been executed with TxDOT? **Not yet, but we expect that to happen in June**
3. If executed, can a copy of the AFA be made available for use with the SOQ? **See #2**
4. What is the estimated preliminary construction cost associated with the project? **\$1,200,000**
5. Is it anticipated that additional property acquisition be required for the project? **No**
6. What does it mean in the “General Project Direction” when it says “the design should include a decorative covering or coating along the sides? **Something besides just concrete that will blend into the park type environment**
7. What is meant by “vandal-resistant construction”? Does this mean using graffiti resistant paint or other things? **Or textured wall coating and theft resistant fasteners, if used.**
8. Is it correct to assume that the proposed bridge structure must pass at least the 5-year storm event and lower frequency events (10, 25, 50, 100-year) overtop the bridge? **We are not sure there is enough space – the existing crossing is in a built environment, which cannot be expanded easily.**
